Text : population planning.

The worldwide population growth is extraordinarily uneven .The developed nations mainly Europe ;the USSR(formerly),North America,Oceania and Japan are increasing relatively slowly,however,the restof the world,th developing nations Asia,Africa,and Latin America are increasingly rapidly.At the curent rate,in forty years,the underdeveloped nation will have added 2.7 billion individuals to the world population,while develeped nations will have added less than half a million.

The cause for this population proliferation can be simple stated :the world has learned and practised death control before it learned and practised life control.Approximately 125million births took place in 1969 as opposed to 6 million deaths,producing an average of 65millionofpeople.

Four important groups reacted to these facts of global population growth.A first group believes that doubling world population is no cause for alarm.A second group,the communists which thinks that it is no use restraining world population because its disadvantages can be eleminated by a proper manipulation of productin.The third group seems to have the same position as the second group,but believes to a natural cataclysm to slow down population growth. The fourth group thinks it is urgent to limit population growth and it can be done through conception control :late marriage ,contraception,sterilization and abortion.

I) Reading comprehension questions :

A) Multiple choice questions : copy the complete sentences containing the correct answer .
