

COMPOSITION DE LA PREMIERE PERIODE 2023-2024			
L. STAR	CLASS: T.SEXP	Duration: 2H	Coefficient : 2

New Revolution

Information and communication technologies have transformed the way humans communicate as well as doing things. In education, ICTs play vital roles in facilitating teaching and learning. The teachers of English are not the exceptions. They have transformed classroom communication methods and modified instruction strategies. Also, ICTs have made teaching and learning interactive and collaborative instead of the traditional teacher- talking and students listening approach. Large class sizes are common phenomenon almost word-wide.

The emergence of the internet has revolutionized the field of education. Many teachers have started to utilize the internet to facilitate teaching and learning. Email can be used by a teacher to reach many students at a distance once the students provide their email addresses. The teacher can use email to send learning materials to students; give assignment; assess and post the feedback to the students' email boxes. By sharing files, students collaborate and work together with their lecturers and colleagues. In this way, there is transformation from traditional teacher-centred approach which makes learners passive receivers to students-centred or democratic approach which makes learners active discoverers and explorers. Through exchange of email, students expand their vocabulary, structures and expressions.

The Website as an internet technology is an essential tool that the teaching can use to facilitate the teaching and learning of English Language in a large.
