Epreuve de : LV1 Anglais

Text:?

Information and Communication technologies in Education refer to teaching and learning the subject matter that enables understanding the functions and effective use of information and communication technologies (ICT). In order to use technology effectively educators need to be trained in using technology and they need to develop a good understanding of it. Technology is used to enhance learning; therefore, it is important for educators to be comfortable using it to ensure that students get the full advantages of educational technology. Teachers must be trained in how to plan, create and deliver instruction within a technological setting. It required a different pedagogical approach. Teachers must find a way to assess students on what they take away from a class and meaningful known knowledge. Education will only change when only our design methods, perspective and values change. Teachers have many roles when it is designed. They can be artists; architects; crafts people and engineers. Technology training appears to focus mainly on technology knowledge and skills while other looking the relationships between technology, pedagogy and content. AS a result, Teachers learn about « cool » stuff but they did have difficulty applying it for their students learning. Teachers' candidates need opportunities to practice effective technology integration strategies in supportive contexts during technology courses, technology integration methods course and fields experiences. Experienced teachers also need opportunities to learn about new technologies and ways to integrate them effectively in their classroom.

Teacher education programmes facilitate improvements not only in students' technology skill, but also in their beliefs and intentions regarding integration technology into instruction.
