CLASSE: TS-EXP

COEFF: 02

DUREE: 02

TEXT: I. C. T. in education

The development of I.C.T. and its tools resulted in the rise of online learning. Teachers and students alike are discovering new ways to approach the educational process as a result of this. During the corona pandemic, online learning has grown in prominence as a way to keep learning going. I.C.T's have ensured that education reaches all corners of the globe, including remote locations. It has ensured that every learner reaps the benefits, regardless of where they are.

I.C.T in education allows all types of students to participate. The materials offered can be used by all students to learn. Even students with unique needs can profit from it if they use it properly. ICT has also addressed issues such as the "digital gap", allowing even the most underprivileged persons to gain access to the resources they need for their educational needs and to improve their learning.

I.C.T encourages higher-order thinking and reasoning. These abilities aided in the evaluation, planning, monitoring, controlling, and reflecting processes, among others. To effectively use ICT technologies, one must be able to explain and justify problem solutions.

Students should be able to debate, test and evaluate the tactics and approaches they employ when utilizing ICTs. ICT's primary purpose is to improve topic learning and skill acquisition. It encourages important literacy and numeracy skills.

As students work together, I.C.T fosters teamwork. As they discuss, talk and study together, it also improves their communication abilities. To understand how it works, all you need is a laptop, tablet or desktop computer. ICT tools make it possible to develop language through facilitating conversation.

QUESTIONS(18pts)
