

COMPOSITION DU 1er TRIMESTRE 2025-2026
Lycée Mahamane Alassane Haidara-Tombouctou

Class: 12th TSEXP

Duration: 2 hours

Coeff.: 2

Text: ICT

Information and communication technologies constitute an assembly of facilities used for the treatment, modification and exchange of information. Their application and areas of implementation are diverse and present in almost all spheres of human activity. Among the different technologies for information communication, the computer and the internet represent privileged means of learning and teaching as they permit wide and rapid exposure to the world as well as enhance pedagogical practices. These technologies contribute to the amelioration of the quality of education because they are not only used as tools for the facilitation of the cognitive development of learners but also as means for exposure by their users.

Thanks to the internet, television, CD Rooms and other media, children today know many things that their parents did not know at their age. The world had been reduced considerably.

And children are impregnated with all kinds of cultures which tend to affect positively the perspectives of today's youths if responsibly used. In matters of education, the constraints in terms of time and money, motivation, technical and pedagogical training as well as accessibility to the computer equipment and need for a pertinent content are constantly at the end of the debate.

As a matter of fact, for ICT to be productive in learning and teaching processes, it is not enough to put one or many computers at the disposal of pupils. The introduction of ICT in schools necessitates a profound reflection on the part of teachers and decision makers.

I. READING COMPREHENSION QUESTIONS (5 pts)

A. Multiple choice questions

Copy the complete sentence containing the correct answer. (1 pt)
